

Mother's Day Life's Journey Gift Guide

By Splash Magazine Staff

Baby Plus

Developed by a developmental psychologist, BabyPlus is a patented curriculum and prenatal education system that introduces patterns of sound to a prenatal child in the one language they hear consistently during the prenatal months and understand' the maternal heartbeat. As a baby distinguishes the simple rhythmic sounds of BabyPlus from those of the mother, learning begins. The simple, safe 16-week curriculum is used one hour twice a day, allowing the baby to hear lessons that are similar to his/her natural sound environment. This teaches the child to distinguish between his or her mother's heartbeat and the sounds produced by BabyPlus. As the pregnancy progresses, the BabyPlus lessons advance slightly. This 'auditory exercise' strengthens learning ability during the developmental period when the advantages will be most significant for a child. Much like a prenatal vitamin encourages strong physical development, BabyPlus encourages strong cognitive development. Available online at BabyPlus.com.
